Connect Quality From The Shop Floor To The Top Floor

Bringing quality products to market that maximize revenue and profitability requires meeting quality and safety standards at every stage of the product life cycle – from design and manufacturing to shipping and distribution to customer support.

For companies to deliver on this objective consistently and with fewer resources, they need enterprise-grade technology to:

- Centralize, harmonize, and automate quality processes.
- Make quality and performance data actionable for continual improvement.
- Integrate essential business systems so that cross-functional teams can work together more effectively.

The ETQ Reliance Connected Worker solution includes enterprise Quality Management System (QMS) capabilities that centralize and automate quality processes with Connected Worker capabilities (provided in partnership with Augmentir) to amplify your quality efforts by extending a voice to the shop floor.

In addition, this robust solution offers technology to onboard frontline workers faster, reduce time to productivity, enable targeted training, and support workers with digital guidance based on individual needs.

“Integrating QMS and Connected Worker is a significant step forward in creating a seamless experience for the worker supported by a symphony of ‘system of systems’ software applications to bring workers’ insights, knowledge, and experiences to bear on the full ecosystem of enterprise-wide quality...”

–LNS Research

Benefits of a Connected Quality Ecosystem

- Break down silos between quality control and quality management and resolve systemic quality issues at the root faster.
- Reduce downtime and costs of poor quality through improved communication and team collaboration.
- Share timely issue information with teams across the value chain to improve decision-making.
- Harmonize processes, increase compliance, and share best practices across sites.
- Human-centric tools that empower and enable frontline worker participation in continuous improvement.
Collaborative Quality Workflows to Empower Every Team

ETQ Reliance, an enterprise Quality Management System solution, has built-in best practices and unique flexibility to configure and integrate with other essential business systems. The result is a closed-loop quality ecosystem that helps you seize every opportunity to reduce risk and improve quality throughout the value chain.

Companies often miss acting on valuable insights from employees because legacy tools and processes don't make it easy to capture and share this information. ETQ Reliance Connected Worker offers user-friendly data collection and automated feedback loops to foster participation, communication, and continual improvement.

“ETQ is committed to creating a quality-driven manufacturing ecosystem by extending quality management to the factory floor and the connected worker.”

– Vick Vaishnavi, ETQ's CEO

Use Cases That Create Business Value

Industry-standard web services and flexible configuration options make it possible to build any process workflow to meet your needs. Explore these use cases and more with ETQ's implementation experts:

<table>
<thead>
<tr>
<th>Use Case</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Faster Resolution of Shop Floor Quality &amp; Safety Issues</td>
<td>Frontline workers can quickly and easily report quality and safety issues from mobile devices for quality managers to investigate, analyze trends, and proactively address problems.</td>
</tr>
<tr>
<td>Improve Supplier Quality Through Team Collaboration</td>
<td>Address raw material issues with suppliers, planners, procurement, and design teams, leading to improved product quality, decreased scrap and rework costs, and faster time to market.</td>
</tr>
<tr>
<td>Quickly Pivot Operations with Planned Deviations</td>
<td>Ensure the most current inspection criteria is always available to avoid false rejection of incoming materials.</td>

Delivering Results

A Connected Quality Approach Delivers Real Top- and Bottom-Line Results:

- Reduce cost of poor quality to drive business performance and profitability.
- Improve supplier quality to reduce scrap, waste, rework, and warranty costs.
- Harmonize and scale global processes for continuous audit-readiness.
- Accelerate delivery of quality products to market by opening lines of communication and removing factory floor process inefficiencies.
- Improve human performance and decision velocity by enabling easy access to information and reducing cognitive load.
