ETO Reliance® Core Application

Training Management

Training Management provides training managers with the tools to ensure connected frontline workers and employees across your organization always have the latest education, training, skills, and experience needed to perform their roles and responsibilities.

Train at the Pace of Business Change

Document Control integration helps you deliver the right training at the right time by linking training courses to any controlled document. When document owners make revisions, the course automatically revises, too. Additionally, you can improve communication organization-wide by connecting training to business processes like corrective action plans or new product introductions.

Do More with Fewer Clicks

Helpful system automation like assignment notifications, reminders, and escalation messages ensure timely compliance and audit preparedness and reduce administrative effort so your teams can get more done.

"Automate with the next revision" setting shown on a Course Profile linked to a controlled document.

Key Benefits

Configure roles, responsibilities, and employee profiles to target and deliver timely training.

Connect training courses to quality processes like corrective actions or new product introductions.

Configure views based on who is accessing the system to create a positive experience for any level user.

Flexible Training Delivery Methods

Deliver training to employees across the value stream based on the needs of individuals, departments, groups, or locations. Options include simple read-and-acknowledge assignments, self-paced online testing, or instructor-led courses. In addition to Document Control linking, you can upload or link to course materials from external sources.

A Central System to Track, Trace, and Report Activity

Whether you have tens, hundreds, or thousands of employees, ETQ Reliance provides a centralized training record repository for every employee at every location. Built-in report views give you real-time visibility into your organization's training program performance, down to an individual's training history and status on upcoming training.

Built-in Training Matrix Framework

An out-of-the-box administration framework gets you up and running quickly to design and deploy an organization-wide training plan. Easily configure roles, responsibilities, and employee profiles and build Course Profiles to organize your training materials, tests, and target recipients.

Powerful REST API Support

In addition, you can integrate other business systems like Learning Management or Human Resources through REST APIs to populate employee profiles without duplicating databases.

"Built-in reports provide real-time training status across the organization"
